Editor's Note

Kyoto University is trying to further globalize research and education. Division of Natural Resource Economics is expected to playing a part for globalization of education in Kyoto University. However, globalization of education is varied. One of the measures for it is to transmit the achievements of students' research works to the world through publication of English papers. This special issue aims to do it by publicizing the research works of young scholars presented at international workshop on "family farming" jointly held with French and German Universities. All the papers were to be examined by the researchers who specialize in agricultural management and rural sociology, and were checked by the editorial committee members. I would like to hear unreserved opinions of readers on this attempt of special issue. (SF)
